On March 26, 2015 the U.S. Census Bureau released the 2014 population estimates for all counties in the State of Michigan. The following table shows the 2010 Census population plus estimates for 2012 through 2014 for the fourteen counties within the EMCOG region. The percentage changes in population are also shown as a comparison of each of the three estimates (2012, 2013, and 2014) to the 2010 census. The Region's population has been declining since the 2010 Census and, based on the 2014 estimate, continues to do so. According to the U.S. Census Bureau estimates the population in the EMCOG region has declined nearly 2% since 2010. Overall, the State of Michigan has remained fairly stable from 2010 through 2013 with a small spurt of growth in 2014 (+0.3% compared to the 2010 census)

There are a number of components included in the determination of population estimates such as births and deaths and migration into and out of an area. The following table provides some details regarding these components that make up the changes from the 2010 Census to the 2014 estimated population for the EMCOG region.

Deaths are exceeding births and the domestic migration out of the region is exceeding the domestic migration in to the region. Exceptions to the net loss from domestic migration are occurring in the more rural areas of Clare, Gladwin and Iosco counties which are showing population growth within this component. The international migration component is showing a different result. The overall population growth from international migration into the region exceeds the population loss from international migration out of the region resulting in a net increase in population within this component.
